PROFILE SUMMARY

As a highly skilled Web Developer and Front-End Engineer, I bring a wealth of experience in software development. My expertise includes React, Vue.js, Quasar, Material UI, Node.js, and both SQL and NoSQL databases, complemented by hands-on experience in cloud computing and microservices architecture.

I have held diverse roles in software engineering, including leadership positions focused on government digital transformation and SPBE implementation. Currently, I serve a dual role as a Front-End Developer at CV Safaat Karya and as the Head of the Application, Information Technology, and Communication Division at the Department of Communication and Informatics of South Konawe Regency.

EDUCATION

- **Master's Degree in Electrical Engineering**
Universitas Islam Sultan Agung (2011 - 2014)
- **Bachelor's Degree in Information Systems**
STMIK Bina Bangsa Kendari (2004 - 2009)

CURRICULUM VITAE

WORK EXPERIENCE

Department of Communication, Informatics, and Encryption of South Konawe Regency

Head of Application, Information Technology, and Communication Division (2022 – 2025)

- Develop and manage electronic-based public service applications.
- Oversee the implementation and management of Electronic-Based Government Systems (SPBE) to enhance government service efficiency.
- Formulate policies and guidelines for IT governance within the local government.
- Coordinate Smart City development and the integration of information systems across government agencies (OPD).
- Ensure data security and IT infrastructure management, including encryption systems and server administration.
- Conduct training and digital literacy programs to enhance civil servants' (ASN) capacity in utilizing technology.

Head of Application Development and Management Section (2019 – 2022)

- Led the development and management of government applications to support public services.
- Designed, implemented, and maintained electronic-based information systems to improve administrative efficiency.
- Managed system integration across different government agencies (OPD) to ensure interoperability.
- Supervised software development projects, ensuring compliance with SPBE (Electronic-Based Government System) standards.
- Ensured the security and reliability of government applications, including data protection and cybersecurity measures.
- Provided technical guidance and training for IT teams and civil servants (ASN) in utilizing and maintaining digital platforms.
- Collaborated with stakeholders, including government agencies, IT vendors, and consultants, to enhance digital transformation initiatives.

Full Stack Developer (2017 – 2019)

- Developed and maintained government applications using Node.js, Express.js, and MySQL to support e-Government and SPBE implementation. Built scalable REST APIs, optimized backend performance, and integrated authentication systems (LDAP/SSO). Ensured system security and compliance with government regulations, collaborated with cross-functional teams, and contributed to Smart City digitalization initiatives.

Front-end Developer, SAFAAT KARYA CV (2017–Present)

Developing and maintaining interactive user interfaces using HTML5, CSS3, and modern JavaScript (ES6+), building dynamic single-page applications with frameworks like Vue.js or React, integrating with RESTful APIs or GraphQL for seamless data exchange, and implementing security measures to sanitize user input and prevent Cross-Site Scripting (XSS) attacks. Furthermore, the role involves creating responsive layouts to ensure cross-device compatibility, optimizing application performance by leveraging tools like Webpack or Vite for efficient bundling and code splitting, conducting comprehensive cross-browser testing, and collaborating with designers and back-end developers on a daily basis using Git for version control.

PORTFOLIO

APPLICATION DEVELOPMENT HISTORY FOR THE PAST 5 YEARS

■ **Regional Election Management Application (SIM-PILKADA) – 2024**

Regional General Election Commission of South Konawe Regency

A web and mobile-based system designed to support the management of regional elections transparently and efficiently, from candidate registration to vote tallying.

Key Features:

- Digital Registration & Verification – Enables online candidate registration with document validation.
- Voter Data Management – Integrated with the civil registry system for voter data validation.
- Campaign Monitoring System – Allows real-time tracking and reporting of candidate campaign activities.
- Election Logistics Management – Tracks the distribution of election materials.
- Automated Vote Counting & Results Dashboard – Real-time vote counting and visualization.
- Security & Audit Trail – Logs all activities to ensure transparency and prevent fraud.
- Multi-Level User Access – Role-based access for election committees, candidates, voters, and monitors.

■ **Cultural Education Application (VIT-B) – 2023**

Department of Education and Culture of South Konawe Regency

An Augmented Reality (AR)-based educational app that allows students and tourists to explore cultural objects interactively.

Key Features:

- 3D Cultural Object Exploration – View traditional artifacts, clothing, houses, and historical sites in 3D.
- AR Tourism Exploration Mode – Users can explore cultural sites through Augmented Reality.
- Interactive Learning & Quizzes – Engaging quizzes and interactive materials for deeper learning.
- Virtual Tour Experience – Offers guided virtual tours of cultural heritage sites.
- Multi-Language Support – Available in multiple languages for international education.
- Leaderboard & Gamification – Motivates learning with points and reward systems.
- AR/VR Device Support – Compatible with AR/VR headsets for an immersive experience.

PORTFOLIO

APPLICATION DEVELOPMENT HISTORY FOR THE PAST 5 YEARS

■ Online Attendance Application (e-Absensi) – 2022

Regional Civil Service Agency of South Konawe Regency

A geolocation-based and facial recognition attendance application integrated with e-Performance to monitor employee productivity in real-time.

Key Features:

- GPS-Based Attendance – Ensures employees are in the designated work location before clocking in.
- Face Recognition System – Prevents fraudulent attendance entries.
- e-Performance Integration – Calculates employee performance scores based on attendance and productivity.
- Real-Time Late Notifications & Reports – Sends automatic alerts for tardiness.
- Leave & Permission Management – Employees can request leave and permissions directly from the app.
- Monitoring Dashboard – Supervisors can view attendance statistics in real-time.
- Multi-Platform Support (Web & Mobile) – Accessible via mobile apps and web portals.

■ Integrated Village Information System (SIMPATI DESA) – 2021

Department of Village Community Empowerment of South Konawe Regency

A centralized digital platform that integrates administrative and public services across 336 villages.

Key Features:

- Public Service Portal – Allows villagers to request official documents online, such as residence certificates.
- Integrated Population Data System – Automatically manages village population data and synchronizes with the civil registry office.
- Village Performance Monitoring Dashboard – Enables local governments to track village development in real-time.
- Citizen Reporting & Complaints System – Residents can report village issues directly via the application.
- Village Financial Information System – Tracks village budgets and expenditure transparently.
- Infrastructure & Development Monitoring – Manages and monitors rural development projects.
- Web & Mobile Access – Available for Android, iOS, and web browsers.
- Multi-Level User Access – Supports users at village, district, and municipal levels.

■ e-Office Application (MANDARA) – 2020

Department of Communication, Informatics, and Encryption of South Konawe Regency

A digital platform for document and correspondence management, helping organizations streamline administrative workflows.

Key Features:

- Incoming & Outgoing Mail Management – Tracks and manages digital correspondence.
- Electronic Signature Integration – Enables official documents to be digitally signed in compliance with regulations.
- Cloud Storage & Digital Archive – Securely stores documents with easy access.
- Disposition & Notification System – Facilitates workflow management between departments.
- Automated Document Generation – Provides official document templates for fast processing.
- Encryption-Based Security – Protects documents with high-level encryption.
- Monitoring & Reporting Dashboard – Visual analytics for document management activities.
